

TYRRELL'S WINES

Australian Family Owned Since 1858

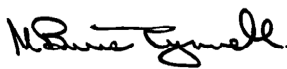

ENVIRONMENTAL POLICY

Tyrrell's Wines operates, manages and maintains one of Australia's larger family owned wineries. We recognise our responsibility to the environment and are committed to proactively managing our interaction with the environment by establishing standards of environmental excellence.

To achieve this we will:

- Incorporate environmental responsibilities and accountabilities into every aspect of our operations and decision making.
- Establish and maintain an environmental management system designed to fully comply with all regulatory requirements, including the International Standard for Environmental Management, ISO 14,000. We will also encourage our contractors and suppliers to achieve these standards.
- Maintain monitoring and reporting systems to audit and report on our environmental performance by promoting continual improvement to achieve our environmental objectives and targets.
- Communicate with our community and interested parties on our environmental performance.
- Identify opportunities to prevent pollution, minimise waste, save energy and conserve natural resources.
- Promote continual improvement and best management practices in the areas of water, energy, carbon, waste and integrated pest management.
- Foster an environmentally responsible culture throughout the operation and encourage our staff to develop new and innovative environmental initiatives.
- Continually review this policy and ensure it is openly communicated to our staff and to the public.

C.E.O and all staff are responsible for ensuring this Policy is implemented.
